1 Musée Rodin companion — dark, native SwiftUI, works-first

Warm charcoal + bronze accent, verdigris reserved for source/verification. System type only, grouped inset lists, glass tab bar. Listen is a one-tap "Read aloud" on each work — no player screen. Facts shown are widely documented; anything unverified is marked "source needed" rather than invented.

ABOUT

A three-figure bronze group: a man is drawn away by an older woman while a young woman kneels behind him, arms outstretched. Often read as autobiographical — Claudel's break with Rodin.

Read aloud
~2 min · 1×

A three-figure bronze group: a man is drawn away by an older woman while a young woman kneels behind him, arms outstretched. Often read as autobiographical — Claudel's break with Rodin — though the artist's own framing is debated in the sources.

DESIGN DOCUMENT · JULY 2026

Musée Rodin Companion — iOS / iPadOS

A personal, source-backed guide to the Musée Rodin collection. Not a PDF library, not a marketing app: a quiet notebook where extracted research becomes readable, listenable knowledge.

---

1 · Concept & rationale

Works browsing is the hero. Everything routes through the work record: places, themes and routes are just curated views onto the same catalogue. PDFs are source material only — they surface as citation chips and a Sources sheet, never as a document shelf.

Honesty is a design feature. Every fact field can be in one of three states: verified (with sources), unverified ("source needed", shown in tertiary italic), or absent. The catalogue openly states it is incomplete ("18 works — growing"). No object fact is ever invented to fill a layout.

Listen is deliberately simple. One "Read aloud" action per work/topic, backed by AVSpeechSynthesizer reading the extracted guide script. No custom player screen — play/stop, a speed toggle (1× / 1.25× / 0.8×) in the button itself, and the transcript is simply the text already on screen. Routes are ordered lists of works; "listening a route" is just reading stop after stop.

Calm by default, depth on demand. Screens show the short visitor description first; "Research note" and "Sources" are collapsed disclosure rows. Advanced filters live behind the filter button, not in the default chrome.

2 · Visual system & tokens (dark)

bg.canvas	bg.card	bg.tertiary	label	accent.bronze	accent.patina
#161310	#221E19	#2A241E	#F3EEE6 (60/35%)	#C89A5B	#8FA898

Rules. Bronze is the single interactive tint (buttons, active tab, selection). Patina is reserved exclusively for source/verification meaning — it never decorates. Separators are label at 8%. Both accents sit near the same OKLCH lightness/chroma so neither shouts.

Typography — system only (SF Pro via Dynamic Type text styles): Large Title 34/700 · Title2 22/700 · Title3 20/600 · Headline 17/600 · Body 17/400 · Subheadline 15 · Footnote 13 · Caption 12 & 11. Never below Caption2; body text never below Subheadline.

Spacing 4 / 8 / 12 / 16 / 20 / 24 / 32 — screen gutter 16, card padding 16, section gap 18–24. **Radii** 8 (thumbnails) · 10 (small tiles) · 16–20 (cards) · 26 (grouped lists) · pill (chips, tab bar, buttons). **Hairlines** 0.5 px. **Icons** SF Symbols at 17 / 22 / 28 pt, weight matching the adjacent text. **Hit targets** ≥ 44 pt.

Motion & haptics. No decorative motion. Standard NavigationStack push/sheet transitions only; disclosure rows animate with the default spring. Haptics: `.impact(.light)` on Favorite/Seen toggle, `.selection` on filter chips, `.impact(.medium)` on Read aloud start/stop.

3 · Navigation map

Guide (tab)	Works (tab)	Listen (tab)	Search (tab)	Notes (tab)
→ Place detail → Theme · Route → Work detail	→ Work detail → Filters (sheet) → Sources (sheet)	→ Route (ordered stops) → Work detail + Read aloud	→ grouped results → any record	→ Note editor (sheet) → linked work/topic

All tabs converge on **Work Detail** — one canonical record, one NavigationStack per tab. Sheets (Filters, Note editor, Sources) never navigate; they return to where you were. iPhone: TabView. iPad: NavigationSplitView — sidebar replaces the tab bar, list + detail beside it.

4 · Screen specs

Guide / Home (1a) — notebook opening, not a landing page. Continue-listening card (only when a route is mid-progress), Places, Explore. No imagery required; striped placeholders until personal photos exist.

Works (1b) — search field, one row of primary chips (All · Rodin · Claudel · Garden) + filter button opening a sheet with the full facet set (sculpture, drawing, correspondence, photograph, garden, Meudon, material, seen/unseen). Rows: thumbnail · title · artist · date · material/location. No confidence indicator here — kept for detail, per decision. Footer states the visible/total count.

Work Detail (1c) — image (optional), title block, verification chip, fact grid (unverified fields show "source needed"), bronze Read-aloud card with inline speed, short About, collapsed Research note & Sources, theme chips, bottom action bar (Favorite / Seen / Note).

Listen — a list of route cards (Highlights, Garden, Hôtel Biron, Meudon, Camille Claudel, The Gates of Hell, Balzac, Drawings, Bronze Editions), each showing stop count, est. minutes, progress. A route is an ordered list of work rows with stop numbers; tapping a stop opens Work Detail and offers Read aloud. No dedicated player screen.

Search — one field, results grouped Work / Topic / Source / Note with section headers; source hits show the PDF title + page and open the cited passage, not the whole PDF.

Notes — segmented control: Notes · Favorites · Seen. Note cards show excerpt + linked record chip. Empty state: "Notes you add on any work appear here." Visitor info, if ever added, carries an "as of <date> — check musee-rodin.fr" caveat line.

5 · Component inventory

WorkRow — 74 pt, thumb 46×56 r8, title Headline, artist·date Footnote, material Caption. Swipe: Favorite / Seen.
WorkDetailHeader — optional image, title Title1, artist·date Subheadline, VerificationChip.
FactGrid — 2-col label/value; unverified = tertiary italic "source needed".
VerificationChip — patina dot + "Verified · n sources"; variants: "Partially sourced", "Source needed" (tertiary, no dot).
CitationChip — patina outline pill: source short-name + page; tap → cited passage sheet.
ReadAloudCard — bronze card: play/stop, script length, inline speed cycle. The only audio UI in the app.
RouteCard — title, stop count, minutes, thin progress bar (bronze).
NoteCard — excerpt Body, linked-record chip, date Caption.
FilterChips + FilterSheet — chips for primary facets; sheet for the rest, with active-count badge on the filter button.
ThumbPlaceholder — 45° stripe on bg.tertiary, monospace caption naming the needed asset.
EmptyState — one symbol, one sentence, optional single action. Never illustrated, never jokey.

6 · Accessibility

Two kinds of speech, clearly separated. Apple VoiceOver reads the UI; the app's Read-aloud narrates guide scripts. The Read-aloud button's VoiceOver label is "Read guide script aloud, about 2 minutes" — so a VoiceOver user knows it starts content narration, not screen reading. Read-aloud pauses when VoiceOver focus moves to it, and is exposed as a toggle button with value "playing / stopped".

Per screen. Home: sections are accessibility containers; Continue card label "Resume route, The Gates of Hell, stop 3 of 9". Works: each row is one element — "The Thinker, Auguste Rodin, 1903, bronze, in the garden. Button."; chips are toggle buttons with selected state; filter button announces active-filter count. Detail: heading trait on the title; fact grid read as label-value pairs ("inventory number: source needed"); focus order title → verification → facts → read aloud → about → disclosures → actions; Favorite announces "Added to favorites" via UIAccessibility notification. Search: results announce group headers. All toggles report state; all targets ≥ 44 pt.

System settings honored: full Dynamic Type (rows grow, grids reflow to one column at accessibility sizes), dark-only palette tested at 7:1 for body text, Increase Contrast swaps 60% secondary to 78%, Reduce Motion is already the default posture, Reduce Transparency replaces the glass tab bar with solid bg.card.

7 · iPhone ↔ iPad

One adaptive design (1d): compact width uses TabView + push navigation; regular width uses NavigationSplitView (sidebar · list · detail). Same components, wider fact grid, Read-aloud card moves beside the facts. Slide Over/split-screen collapses back to the compact layout. State (selection, filters, playback position) survives size-class changes.

8 · MVP scope

Build first	Postpone
Works list + filters (chips only) · Work Detail with fact states & citations · Read aloud via AVSpeechSynthesizer · Favorite / Seen / plain-text notes · Home with Places & Explore · the 18 starter works, hand-extracted.	Full-text search across PDF extractions · Listen routes & progress · Themes browsing · filter sheet facets · iPad three-column polish · cited-passage viewer · images & rights workflow · visitor info.

Try next: "mock the Listen routes screen like 1b" · "show 1c at an accessibility text size" · "try a lighter parchment variant of 1a"
